Honda GX390 Solenoid Operated LPG Dual Fuel Conversion Kit

Prod Code: 3010-GX390-1651

This is a conversion kit to convert an electric start Honda GX390 to LPG. The conversion will also enable the user to run the engine on either petrol or LPG.

Solenoid Operated LPG Dual Fuel Kit
This type of kit is simply a frame mount kit for electric start engines which is operated by a solenoid
system. It is an additional safety system that shuts off the LPG supply when the engine ignition is
turned off, meaning you do not have to turn the LPG off at the cylinder.

However it is important to note, that if the engine stopped for any reason such as a mechanical fault, and the ignition is still turned on, then the solenoid would remain open. This means LPG could potentially leak and the battery would flatten. To prevent this, a solenoid safety control module can be added to this LPG kit, a neccesary feature for all remote start operating.

The kit will arrive with all LPG fittings secured and the LPG hose must be cut to lengths to suit your frame size.

SPECIFICATIONS

Approx fuel consumption	1.8kg/h @ 75% load
Alternative option for this kit	European bottle regulator
Additional options for this kit	Remote start module - Quick Release Coupling
Fuel Type	LPG Propane
