

# Operator Instruction Eu70is Parallel Connector

1) Mount the unit to the pivot handle of one of the Eu70 generators with the saddle clamps.

2) Plug the banana plugs into the control panel on both generators.

3) Connect the earth cables onto the earth points on both generators using an 8mm spanner.

4) Fasten the earth cables to the frames on both generators with the reusable cable ties.

5) Once assembled fold down the handle

6) Plug your cable in to the large (63 amp) blue socket on the parallel connector but **DO NOT SWITCH ON**

Start up both generators in turn and allow them to warm up (approx. 1 minute)

The load can now be switched on.

**Warning :** Always switch off load before stopping either generator.

**Warning :** Do not exceed 12kW total load
