SEK-10A Safety Shut-off Valve Kit

Prod Code: 3011-GEAR-867

12 VOLT LOCKOFF, 3/4" NPT (FOR ENGINES W/ OUT OIL FILTER)

Safety Shutoff Valve Kit for Existing Remote Control/Automatic Start-up. If your generator has an existing remote control or automatic start-up this kit will provide the safety feature of shutting off the fuel supply of the natural gas or propane that is free flowing through the line should the unit stop functioning at any point in time. NOTE: This kit does not make your pull start remote or automatic.

SPECIFICATIONS

Fits Engines without oil filter

Connect "IGN" (gention) terminal of Microvec to coll able terminal of lightion switch. If there is no bypass resident in the ignition clistal's this wire may be connected in the lightion clistal's this wire may be connected in the lightion cell.

For use as a B-select switch, simply do not connect the center terminal, use the two out-sale terminals only. Proceed to step 5. For use as a B-select so-thick, proceed with these 5 and 6.

STARTING THE ENGINE basiss installating: Start angine on a closed hypothe is use a paragoing action to allow the theritik to close resensately to baild up manifold vectors to deserve enversally span sirval ("IGN" to "SOL"). Solanoid alway with enversion and an antifold vectors

8-also legislation Normally, the angles will start any thorito position. The rememby dowel starts long 5, "526" to "501") will extended with the start function of the start and the starts when
