

Honda EU26i LPG Carb Manifold Assy

Prod Code: 3012-HOND-21823

This is a complete manifold assembly that delivers the LPG to the carburettor of the engine. It must be connected to a GearGB regulator assembly to operate the engine on LPG. The male quick release coupling connects to the female coupling supplied with the GearGB bottle mount regulator and hose assembly.

If purchased in addition to a complete GearGB LPG kit and fitted to another generator, it gives the ability to use the same regulator assembly for multiple generators. This can be used if you have more than one generator and you wish to operate them on LPG at separate times. Simply disconnect the quick release coupling and reconnect the second generator to the regulator assembly.

SPECIFICATIONS

Fits	Honda EU26i
Kit type	Bottle Mount and Door Mount
